iphone Installing Additional Drivers on Mac OS X With your Mac OS X installation CD or DVD in the drive, hold down the Option key as your computer starts up. The installation CD or DVD is in the drive's icon list. If not, eject the installation CD or DVD and insert it into your Mac. Hold down the Option key until the Startup Manager opens, as shown in Figure 14-9. You'll see a list of drives, including the optical disc drive. 14-9. In the Startup Manager, you can install additional drivers to your Mac if it does not have the latest version. Select the icon of the hard drive that contains the installed Mac OS X operating system. You may be asked for your administrator password. The installation process is generally self-explanatory, and you can begin installing any additional drivers. Installing Additional Drivers from Web Sources You can install additional drivers from web sources. This process is used to install drivers and updates for your computer if you do not have the appropriate drivers and updates for your hardware on a disc or USB drive. To install drivers from a web source, first set your web browser to the correct web browser and then perform a search in your web browser for any additional drivers you require. Often, you will need to download the driver as well as the software to install it. For example, you may need to install any additional drivers for your wireless Internet adapter. To set your web browser to the correct web browser, set the following: Internet Explorer (for Windows users) Safari (for Mac OS X users) Firefox (for Mac OS X users) If you are a Mac OS X user and you need to install additional drivers for your wireless Internet adapter, simply type: sudo softwareupdate into the Terminal app. The softwareupdate command will search your Mac for any available updates for your hardware, including any drivers. After the command has completed, you may be prompted for your administrator password. After you are given permission to install the updates, the softwareupdate command will begin the installation of any new drivers. 15. Transfer the files from the USB drive to the Mac OS X partition. Rename the folder to New-VST, as shown in Figure 15-4. 14.13.04 15.30 15.50 16.00 Figure 15-4 82157476af
